Student Learning Habits and Academic Performance Survey

Research questionnaire (final design). Anonymous, voluntary, about 10-12 minutes.

This questionnaire investigates the relationship between university students' learning habits, academic experiences and academic performance. The information collected will be used for academic research into machine-learning-based classification of student academic performance. Participation is voluntary. No names, registration numbers, telephone numbers or personal email addresses should be collected.

Status: this PDF is the questionnaire design. The Google Form must be created by running google_form_apps_script.gs (see README). No form has been created and no responses have been collected.

Please do not enter your name, registration number, telephone number or email address anywhere in this form.

Researcher notes (not shown to respondents)

Target variable and grading scheme

The performance category is derived from question 30 (current semester average) **only**, using thresholds fixed before any model is trained. It is never calculated from study hours, attendance, assignment completion or any other predictor.

Category	Mean score (%)	Kenyan degree-classification analogue	Matching band in Q30b
High	60 and above	Upper Second Class and above	70%+ and 60-69%
Medium	50 to 59.9	Lower Second Class	50-59%
Low	Below 50	Pass band / marginal / failing	40-49% and Below 40%

Grading-scale harmonisation (limitation, not an assumption)

Kenyan universities do not all use the same scale. Respondents state the format they used (Q27a, Q30a) and the band their university maps it to (Q30b). Percentage means map directly to the thresholds above. GPA responses should be converted only through the institution's published conversion table, and responses whose scale cannot be defensibly mapped must be excluded or analysed separately, and this must be reported as a limitation. Do not assume that a 3.0/4.0 GPA at one university equals a 3.0/5.0 GPA at another.

Previous vs current performance (leakage control)

Question 27 asks about the semester **before** the most recently completed semester, and question 30 about the most recent one, so previous performance refers to an earlier period. Previous performance is nevertheless expected to correlate with the target and must be tested for redundancy (refit without it).
